Good Morning (again) German,
I just watched the video a few times and love all the effort to increase efficiency!
Go ahead and remove any charts that will clean up the sheet. Thank you!
I'm also intrigued by what you might replace the importrange formula with - keep me posted on that.
I do think that once I send the survey out I'll request more info from that set of employees I sent the survey to. Would also be fun to see if we could add a dynamic chart to their personal files....
Let me know if you see anything else in their surveys you think we should act on sooner than later. I want people to have fun with the tracking sheet and for them to not feel burdened by it.
Hope you have been well - chat with you again soon!
Holly

German Milla shared an item

German Milla (pymosv@gmail.com) has shared the following item:

Good day Holly! I am sharing a video with the changes I did in the files. These are mostly backend changes, but will allow us to remove duplicated data and unnecessary IMPORTRANGE formulas. Please let me know if you have any questions.

Hi again!

Thank you, I will delete them. I am replacing the IMPORTRANGE with a combination of arrays, lambda formulas and index / match to act as a vlookup to the table we already are exporting in the Master Data tab. Since we already have it imported, there is no need to have more IMPORTRANGES besides the ones in that tab. Thank you, looking forward to hearing additional feedback regarding the email! We can definitely add dynamic info, depending on the email recipient. Would it be ok if we start testing it out? I will keep an eye and change some other things I consider need optimization / changes.

Hope you are doing well too, talk to you soon!

Good Morning,
Going to send some text emails from the Monthly Summary tab.
One thing I'd like to mention is that today it seems like the sheet is taking a long time to load and refresh. My laptop is almost HOT it's working so hard and I only have that google sheet open plus a gmail tab. I'm curious if perhaps some changes aren't working in the right direction as far as performance goes?

Holly

Ok unfortunately I don't think the script is going to run today. Do you mind checking into that for me?

Thanks,

Holly

It seems it's back on... I think the file won't allow me to replace the IMPORTRANGES with anything else, so I will leave it for now

Good Morning,

I'm hoping we can solve an issue that I'm seeing.

Ex. If we add (insert) a row to the master tracking projections for ex. March 2024 Projection it will add only add the new items into a few columns into the employee tracking sheets which makes their projections wrong if they've already added hours in. It will then essentially add their hours for another task.

This is why I was hesitant on adding new rows into the main portion of the month and not at the bottom. Let me know what you think. I'd like to get this fixed as soon as possible.

Holly

This is similar if we delete a row - it only deletes a section from the employees sheets and messed up any values that they've already added in for projections :(

Sorry one more request - please remove Aaron from March and beyond.

Holly
